```
Basic
1. What is the output of the following code?
inti = 16; intj
= 17;
System.out.println("i >> 1 = " + (i >> 1)); System.out.println("j
>> 1 = " + (j >> 1));
A. Prints "i >> 1 = 8"
"j » 1 = 8"
B. Prints "i >> 1 = 7" "j » 1 = 7"
C. Prints "i >> 1 = 8"
>> 1 = 9"
D. Prints "i >> 1 = 7"
"j >> 1 = 8"
2. What is the output of the following code?
int i = 45678; intj
= -i;
system.out.println(j);
A. Compilation error at line 2-. ~ operator applicable to boolean values only.
B. prints 45677.
c. Prints -45677. D.
Prints -)45679.
3. What will happen when you invoke 'the following method?
void infiniteLoop()
byte b = 1; while
(++b>0);
```

PG DBDA FEB 19 Object Oriented Programming with JAVA 8

```
System.out.prin
   tln("Welcome
   to Java");
   }
   A. The loop never ends(infiniteLoop).
   B. Prints "Welcome to Java". '
   C. Compilation error at line 5. ++ operator should not be -~ used for byte type variables.
   D. Prints nothing.
4. What is the output for the following lines of code?
System.out.printin(" " +2 + 3);
System.out.printin(2*+3); System.out.println(2
+ 3 +"")-; system.out;println(2+""+3);
A. Compilation, error at line 3
                                                B. Print s 23,6,5 ,2,3
C. Prints 5, 5, 5 and 23.
                                                D. Prints 23, 5, 23 and 23.
5.. What will happen if you compile/ run this code?
inti = 012;
intj = 034; int
k = 056; int l
= 078;
System.out:println(i);
System.out.println(j);
System.out.println(k);
A.Prints12,34"and56. * ~
                                    B. Prints 24,68 and 112.
C. Prints 10,28 and 46.
                                    D. Compilation error
6. When executed the following line of code will print
System.out.println(-1 * Double.NEGAT | VE_| NFINITY);
A. –Infinity
                        B. Infinity
                                               C. NaN
                                                                                   D. -NaN
7.. Which of the following are the correct signatures for method main()?
A. public static void main()
                                                           B. public static int main(String arg[])
C. public static void main(String arg[])
                                                           D. public static void main(String args[])
E. private static void main(String args[])
8. Which of the following statements is/ are true? A.
Java provides automatic garbage collection.
B. The garbage collector is a low priority thread.
C. The method gc, when executed from a method, runs garbage collector.
D. If certain precautions are not taken, the garbage collector may collect some objects still in use.
E. You can force garbage collection of an object by setting all references to that object to null.
9. What is the size of a byte datatype?
A. -128 to 127
B. (-2 power 8)-1 to 2 power 8
C. -255 to 256
D. depends on the particular implementation of the Java Virtual machine
```

10. Which line out of the following will compile without a warning or an error?

PG DBDA FEB 19 Object Oriented Programming with JAVA 8 A. boolean b=null; B. float f=1.3; C. byte b=257; i=10; 11. jvm ls A. platform dependant B. platform Indepedent C.depends on jvm implementation D. Both b and c 12. return type of main method is A. int B. char C. void D. None of the above 13. Garbage collection works on D. None of the above A. heap B. queue C. tree 14. What will be printed out if you attempt to compile and run the following code int i=1; switch (i) case O: System.out.prinUn("zero"); break; case 1: System.out.println("one"); case 2: System.out.prinUn("two"); default: System.out.println("default"); D. Default A. One B. one, default C. one,two,default 15. If a local variables of a method shop() belonging to a class called Walmart has the same name as a data member of Walmart, which value is used when shop() is executing? A. the local variable's B. the class variable's C. the data member's D. None of the above since this would cause a compiler error 16. .void main() { int k=35,*z,*y;z=&k; y=z*z=++*y; k++; printf("%d %d",k,++*z,*y++); A. 363637 B. 383837 C. 373737 D. none of these 17. what is the output of the following c program: int fun (int i)

printf("in funtions int i");

printf("in functions int& i");

void fun(int & i)

main()

3

```
int i=9;
           fun(i)-;
           }
                                                                                  C. in funtions int i
           A. ambiguity error
                                               B. in functions int& i
           D. syntax error
                                               E. runtime error
18. what will be the output of the following program?
void main()
char *s="12345s\n\t";
printf("%d",sizeof(s)+str|en(s));
                                   B. 14
                                                          C. 12
                                                                                  D. 10
                                                                                                          E. 7
           A. 17
19. char *f()
char *s=(char*)ma||oc(8);
strcpy(s, "goodbye");
return 5;
void main()
char *f();
printf("%c", *f()='z');
           A. goodbye
                                   B. zoodbye
                                                                                   D. 10
                                                                                                          E.Z
20. what will be the output of the following program?
'main()
Int,I;
Unsigned num=71;
For(i=16;I;--i)
Printf("%d",(num<<i&1<<16)?1:0);
           A. 000000000010111
                                               B. 1110001100000000
           C. 1110001000000000
                                               D. 01100000010000000
           21. void main()
           int y; unsigned
           int x=1; v="0;
           iflx==y)
           printf("equa|");
           else
           printf("not equal");
           A. equal
                                   B. not equal
                                                                                  C. compile time errortype mis-match
                                   E. compile time error |value required
           D. runtime
```

PG DBDA FEB 19 Object Oriented Programming with JAVA 8

AWT

- Adapter class is not available for
 A. ItemListener
 B. MouseListener
- C. KeyListener
- D. WindowListener

```
2. Given public class MyApp extends Applet
{
    public MyApp(int k)
    {
    }
}
```

What will happen to the above code?

- A. compilation error "cannot instantiate MyApp"
- B. runtime error "paint() method not available"
- C. runtime error "InstantiationException"
- D. compilation error "paint() not defined"

What will happen?

- A. compiler error "add method must take 2nd argument as GridBagConstraints"
- B. exception during runtime
- C. Button will appear according to gridwidth and gridheight specified
- D. Button will appear but not according to gridwidth and gridheight specified.
- 4. Select correct statement from the following
 - A. BorderLayout is the default layout for Applet
 - B. GridLayout can not work without GridBagConstraints
 - C. pack() method displays window in a preferred size
 - D. FlowLayout can not be used for swing components
- 5. Given setLayout(new BorderLayout()); add("south",new TextField(20)); What will happen to the above code?
 - A. compiler error
 - B. textfield will be displayed properly at south
 - C. exception
 - D. textfield will be displayed in the center, since u have given illegal argument.
- 6. Select the wrong statements from the following

PG DBDA FEB 19 Object Oriented Programming with JAVA 8

- A. Applet extends Panel
- C. Dialog extends Frame

B. FileDialog extends Dialog

D. Window extends Container

7. Given public class Trial extends Frame

```
{
        public Trial(String mess)
                   MenuBar mb=new MenuBar();
                   // here
How will u add "mb" to the frame?
```

A. addMenuBar(mb);

B. setMenuBar(mb); C. mb.addMenuBar();

D. add(mb);

- 8. Which method is required to read parameters pass to Applet?
- A. getParameter
- B. getInitParameter
- C. getAppletParameter
- D. none of these
- 9. What is sent to the user via HTTP, invoked using the HTTP protocol on the user's computer and run on the user's computer as an application?
- A. A Java application B. A Java applet
- C. A Java Servlet
- D. None of the above
- 10. java.awt.Component class method getLocation() returns Point (containg x and y cordinate). What does this x and y specify
- A. Specify the position of components lower-left component in the coordinate space of the component's parent.
- B. Specify the position of components upper-left component in the coordinate space of the component's parent.
- C. Specify the position of components upper-left component in the coordinate space of the screen. D. None of the above
- 11. When u invoke "repaint()", for a lightweight component, the AWT package calls which component method?

A. repaint()

B. update()

C. paint()

D. draw()

- 12. What does the following line of code do? TextField tf=new TextField(30);
- A. This code is illegal, as there is no such constructor available inside "TextField" class.
- B. Creates the TextField object, that can hold 30 rows, but since it is not initialized to anything, it will be always empty.
- C. Creates a new TextField object that is 30 columns of text.
- D. This code creates a TextField object that can hold 30 rows of text
- 12. Which of the following the valid way to embed an applet class named myapplet into a web page.
- A. <applet class=myapplet.class width=100 height=100> </applet>
- B. <applet code=myapplet width=100 height=100> </applet>
- C. <applet code=myapplet.class height=100 width=100 > </applet> D. <applet param=myapplet.class width=100 height=100> </applet>

PG DBDA FEB 19 Object Oriented Programming with JAVA 8

13. What is the purpose of "code" attribute of the applet tag? A.

A URL that points to the class of the applet.

- B. A URL to the applet when it is stored in jar or zip file.
- C. Indicate the base URL of the applet if the code attribute is relative.
- D. Defines the horizontal spacing around the applet.

14. Executable applet is nothing but	file of applet.
--------------------------------------	-----------------

A. class

B. java

C. html

D. applet

- 16. Select correct statement from the following
- A. Invisible components are required in SwingLayout
- B. BorderLayout is the default layout for JApplet
- C. the default lookandfeel for swing components is MotifLookAndFeel.
- D. swing does not have DelegationEvent model.
- 17. Method to apply menubar to the swing container is:
- A. addMenuBar() setMenuBar()
- B. setJMenuBar()

C. setSMenuBar()

D.

- 18. Select wrong statement from the following
- A. FlowLayout is the default layout for Applet.
- By default Frame is invisible.
- C. pack() method displays window in a preferred size
- D. None of these.
- 19. Given setLayout(new BorderLayout()); add(new TextField(20));

What will happen to the above code?

- A. compiler error
- B. exception

}

- C. textfield will not be displayed since u haven't mentioned an area.
- D. textfield will be displayed in the center.

```
20. Given import java.awt.*; public class MyFr2 {
```

```
Button b1,b2;
public MyFr2(String title)
{
          Frame f=new Frame(title);
          f.setLayout(new BorderLayout());
          b1=new Button("ok");
b2=new Button("cancel");
          f.setLayout(new FlowLayout());
          f.add(b1);
          f.add(b2);
          f.setSize(400,400);
          f.setVisible(true);
}
public static void main(String args[])
{
          new MyFr2("My Window");
}
```

PG DBDA FEB 19 Object Oriented Programming with JAVA 8

What will happen to the above code?

A.

Class Dog extends Animal{} Class Cat extends Animal{}

A. compiler error "can not set layout twice" B. frame will be displayed with only one "cancel" button

C. frame will be displayed with two buttons. D. exception during runtime.

	1) Cloneable interface A. True	CLONE e contains "clone()" met B. False	REFLECTION API	
	2) Clone method is deA. IOExceptionC. CloneNotSupporte		B. CloneNotFoundException D. None of the above	
	3) Clone() method in (A. Protected	Object class is B. Public	C. Default	D.Private
	4) If u override "clone A. Protected	e()" method u can apply a B. Public	access modifier C. protected or public	D. Default
	5) By default "clone" A. Shallow copy	method does B. Deep copy	C. Shallow and deep both copies	D. None
	6) Interface which doe A. Empty	es not contain any meth B. Methodless	od is called as C. Marker	D. Void
7)	Inner class methods A. True	can access outer class m B. False	nembers directly	
8)	Static nested class m A. True	nethods can access outer B. False	r class members directly	
9)	There is one instance A. True	e of class "Class" per clas B. False	ss loaded.	
10)) To instantiate a part	icular class through refle	ection api we use	
۱. ا	New Class	B. Class.newInstance	C. Class.newCreate	D. None of the above
		COLLECT	TION API	
	 One of the followin A: Hashtable C: ArrayList 	B: CopyOn	dificationException if we try to mo WriteArrayList entHashMap	dify while iterating over it

EXCEPTION

```
1. Given Following code:
import java.io.*;
class sub extends base
        void disp()throws IOException
}
class base
        void disp()throws Exception
public class myclass
        public static void main(String args[])
        {
                               try
                    base b=new sub();
                                                      b.disp();
                    catch(Exception ee)
                               System.out.println(ee);
                    System.out.println("done");
                                                                  D. output "done"
A. warning
                    B. compilation error
                                          C. runtime error
```

PG DBDA FEB 19 Object Oriented Programming with JAVA 8

- 2. Which statement is false from the following? A. we can have try and finally without catch
 - B. finally gets executed irrespective whether exception is raised or not
 - C. if system.exit is called from within try or catch, finally will not be executed at all
 - D. none of the above
- 3. Class.forName requires which of the following exception to be handled
 - A. ClassCastException

B. ClassNotFoundException

C. IllegalAccessException

- D. none of the above
- 4. Class.newInstance() requires which of the following exception to be handled
 - A. IOException

B. ClassNotFoundException

C. IllegalAccessException

- D. none of the above
- 5. Imagine there are two exception classes Exception1 and Exception2 derived from the Exception class. Given these two definitions:

```
class First
{
          void test()throws Exception1,Exception1
          {
            }
}
class Second extends First
{
          void test()
          {
            }
}
```

Now define a class "Third" derived from "Second" and override "test ()" method inside it. What exceptions can Third's test() method throw?

A. Exception1

B. Exception2

C. No checked exceptions

D. it can declare any checked

```
6. What letters get written to the standard output with the following code? public class MyClass {
public static void main(String args[])</pr>
{
try
{
```

}

- 7. Which statement is false from the following?
 - A. The exceptions that are checked at compilation-time by the Java Compiler are called
 - B. 'Checked exception'.
 - C. The exceptions that are checked by the JVM are called 'unchecked exception
 - D. Both 1 and 2
 - E. None of the above
- 8. Read the following code below. public interface AQuestion { public abstract void someMethod() throws Exception; }
 - A Class implementing this interface should
 - A. Necessarily be an abstract class
 - B. Should have the method public abstract void someMethod();
 - C. Should have the method public void someMethod() which has to throw an exception which is a subclass of java.lang.Exception.
 - D. Should have the method public void someMethod() which need not throw an Exception.

What will happen when one tries to compile and run above code?

PG DBDA FEB 19 Object Oriented Programming with JAVA 8

A. Compilation Fails

- **B.** The program will print Hey There, then will print in finally.
- **C.** The program will print Hey There, then will print that an Exception has occurred, and then will print in finally.
- D. None of them

```
10 Given:
1. public class Foo {
2. public static void main(String[] args) {
3. try {
4. return;
5. } finally {
6. System.out.println( "Finally" );
7. } 8. }
     9.}
     What is the result?
                                                                           D. None of the above
  A. Finally
                          B. Blank
                                                   C. Null
  11. In exception handling mechanism, finally block is always executed, even if no exception occurred in the
      try block
  A. True
                                       B. False
  12. Exceptions can be caught or rethrown to a calling method.
  A. True
                                       B. False
  13. Given Following code: import java.io.*; class
     base
     {
              void disp()throws IOException
              }
     class sub extends base
              void disp()throws Exception
     }
     public class myclass
              public static void main(String args[])
```

A. compile error

{

}

B. neither compilation nor runtime error

C. no compilation error but exception at runtime.

14. What will happen to the following code? public class Test

```
{
        public static void aMethod() throws Exception
          try /* Line 5 */
             throw new Exception(); /* Line 7 */
          finally /* Line 9 */
             System.out.print("finally"); /* Line 11 */
        public static void main(String args[])
             aMethod();
           catch (Exception e) /* Line 20 */
             System.out.print("exception ");
           System.out.print("finished"); /* Line 24 */
        }
      }
      A: finally
                                       B: exception finished
      C: finally exception finished
                                       D: compilation fails
   15. Which statement is true, if the following program is run by java test10? public class test10
      {
                           public static void main(String []args)
                     String []num={"one","two","three","four"};
      if(args.length==0)
                                                  System.out.println("Zero");
                                       else
      System.out.println(num[args.length]+" arguments");
        }
A. The program won't run because argument of main is not properly mentioned
```

- B. The program will throw a NullPointerException
- C. The program will display Zero when executed
- D. The program will display 0 arguments when executed

PG DBDA FEB 19 Object Oriented Programming with JAVA 8

```
16. following program will not print "==" public class test12
            public static void main(String args[])
                       String first="abc";
                       String second=new String(first);
                       if(first==second)
                                   System.out.println("==");
A. True
                                                           B.False
17. Assuming a method contains code which may raise an Exception (but not a RuntimeException), what is
the correct way for a method to indicate that it expects the caller to handle that exception:
                                               B. throws Exception
A. throw Exception
                                               D. Don't need to specify anything
C. new Exception
18. What is the result of executing the following code, using the parameters 4 and 0:
   public void divide(int a, int b)
        try
   {
                 {
          int c = a / b;
      catch (Exception e)
        System.out.print("Exception ");
      } finally
       System.out.println("Finally");
A. Prints out: Exception Finally
                                                           B. Prints out: Finally
C. Prints out: Exception
                                                           D. No output
19. Given public class MyClass
   {
                       public static void main(String args[])
   {
                       String s1="hello";
                       String s2=new String("hello");
                       String s3="hello";
   System.out.println(s1==s2);
   System.out.println(s1==s3);
   System.out.println(s1.equals(s2));
   What will be the output?
A. true, true, true
                                                           C. false, true, true
                                                                                   D. none of the above
                       B. true, false, true
20. specify which of the following is true?
```

A. protected members can not be accessed directly in the same package.

PG DBDA FEB 19 Object Oriented Programming with JAVA 8

- B. Protected member can be accessed with super class reference in different package.
- C. Private member can be accessed by subclass using super keyword.
- D. Constructors are not inherited.

```
21Can you declare method local variable as final and can an abstract class may be final?
                       B. Yes, no
A. Yes, yes
                                                          C. No, yes
                                                                                             D. No, no
22. Which of these methods of String class is used to obtain character at specified index?
                                   B. charOn()
                                                                      C. charat()
A. char()
                                                                                             D. charAt()
23. What will happen in the below code snipet: public
  class MyClass
                       float f;
                                   double d;
           int i;
                       boolean bl;
                       public static void main(String args[])
                       {
                                   System.out.println("int = "+i);
                                   System.out.println("float = "+f);
                                   System.out.println("double = "+d);
                                   System.out.println("boolean = "+bl);
                       }
   }
A. Int=0 float=0.0 double=0.0 boolean=false
B. Compilation error: cannot make static
  reference to the non-static field
C. Int=0 float=0.000 double=0.000 boolean=false
D. Compilation error: variable may not have been
  initialized
24. What is legal?
                       B. Try{}catch()finally{}
A. Try{}catch()
                                                          C. Try{}finally{}
                                                                                 D. All of the above
25. What will be returned?
   Try{return 1;}catch(){return 2;}finally{return 3;}
A. 3
                       B.2
                                                          C.1
                                                                                  D. Compilation error
26. One of the following is unchecked exception
A. IOException
                                               B. ClassNotFoundException
C. FileNotFoundException
                                              D. None of the above
27. Which one is checked exception
A. ClassCastException
                                        B. MalformedURLException C.
ArrayIndexOutOfBoundsException
                                               D. None of the above
28. In order to declare exception which keyword is used
                                                                                 D. None of the above
A. Throw
                       B. Throws
                                              C. Throwing
```

29. Class.forName throws

A. ClassCastException

B. ClassNotFoundException

Shriram Mantri Vidyanidhi Info Tech Academy PG DBDA FEB 19 Object Oriented Programming with JAVA 8

               int k;
      }
      class sub extends base implements Serializable
               int j;
      If we try to serialize instance of sub class,
      A: sub as well as base state will be serialized
      B: NotSerializableException
      C: only sub instance will be serialized
      D: compiler error "cannot serialized object having non-serializable parent"
   5. Classes that do not implement interface will not have any of their State serialize or deserialized.
      A: List
                           B: SingleThreadModel
                                                              C: Serializable
                                                                                     D: Comparable
   6. Which one of the following is not from java.io.package
   A. String - correct ans
                                      B. StringReader
                                                              C. Writer
                                                                                     D. File
   7. What is the output?
      public static void main(String[] args) {
              // TODO Auto-generated method stub
                                                                  int
      x=0;
                     int y=10;
                           do
                                                                         ++x;
                           }while(x<5);</pre>
                           System.out.println(x+"\t"+y);
       output- 5 5 how does readObject() of ObjectInputStream indicate end of
      file?
   A. returns null
   C. throws java.io.EOFException - correct ans
                                                              D. closes automatically
   8. What does the following code do?
      File f=new File("hello.test");
      FileOutputStream fos=new FileOutputStream(f);
A. Create a file "hello.test" if it does not exists in write mode.
```

- B. Open a file named "hello.test", so that u can write to it and read from it but does not create the file if it is not existing yet.
- C. Open a file named "hello.test", so that u can write to it and read from it.
- D. Create an object that you can now use to create and open the file named "hello.test" and write to and read from the file.

```
9. Given this code:
   Import java.io.*;
   Class Write
            Public static void main(String args[])
            {
                        File f=new File("a.txt");
                       FileOutputStream fos=new FileOutputStream(f);
                       // write int here inside the file
   How can u replace the comment at the end of main with code that will write integers from 0 to 9?
a)
            DataOutputStream dos=new DataOutputStream(fos);
                       for(int i=0;i<=9;i++)
                                    dos.write(i);
b)
           for(int i=0;i<=9;i++)
                                    f.writeInf(i);
                        }
           for(int i=0;i<=9;i++)
c)
            {
                                    fos.writeInt(i);
           DataOutputStream dos=new DataOutputStream(fos);
d)
                       for(int i=0;i<=9;i++)
                                    dos.writeInt(i);
                       }
```

- 10. What is the permanent effect on the file system of writing data to a new FileWriter("report"), given the file report already exists?
- A. The data is appended to the file
- B. The file is replaced with a new file
- C. An exception is raised as the file already exists
- D. The data is written to random locations within the file
- 11. Which one is wrong statement?
 - A: FileInputStream fis=new FileInputStream("abc.txt");
 - B: DataOutputStream dis=new DataOutputStream(new FileOutputStream("xyz.txt"));
 - C: FileOutputStream fos=new FileOutputStream(new File("aaa.txt"));
 - D: FileOutputStream fos=new FileOutputStream(new ObjectOutputStream("aaa.txt"));
- 12. Which statement is correct?
 - A: Externalizable is a base interface of Serializable
 - B: String class is final hence cannot be serialized
- C: When a class implements Serializable and it is descrialized using readObject(), constructor is never invoked.
 - D: Externalizable is a marker interface.

A. True	B. false
A. IllegalArrayException B. Arra	sub class array then there is a possibility of ayStoreException e of the above
7. In case of Extends we can add A. True B. fals	se
8. In case of super we can add A. True B.fals	e
9. List Super Thread mylist=new Array A. Yes B. no	List <object>() will work</object>
10. List Super Dog mylist=new ArrayL A. Yes B. no	ist <animal>() mylist.add(new Cat()); will work</animal>
11. List allows u to add A. True B. fals	se ·
12. List <object> allows u to add A. True B. fals</object>	e
default accessibility modifier as	() { System.out.println("hello"); } } Above method is having by b. private D. protected
Select one: A. No error, but no output	rayList(); mylist.add(30); String s=(String)mylist.get(0); None of these Exception
15. You can add in case of super A. True B. False	
16. During compilation, compiler remove A. Generic Remove B. Generic Erasu	s all generic type of information. This is known as are C. None of these D. Type Erasure
17. Polymorphism applies to "generic" ty A. False B. True	pe and not "base" type
18. If u declare List mylist, u cant add A. False B. True	
1. What is the output of following cooclass a{static{	INHERITANCE e.

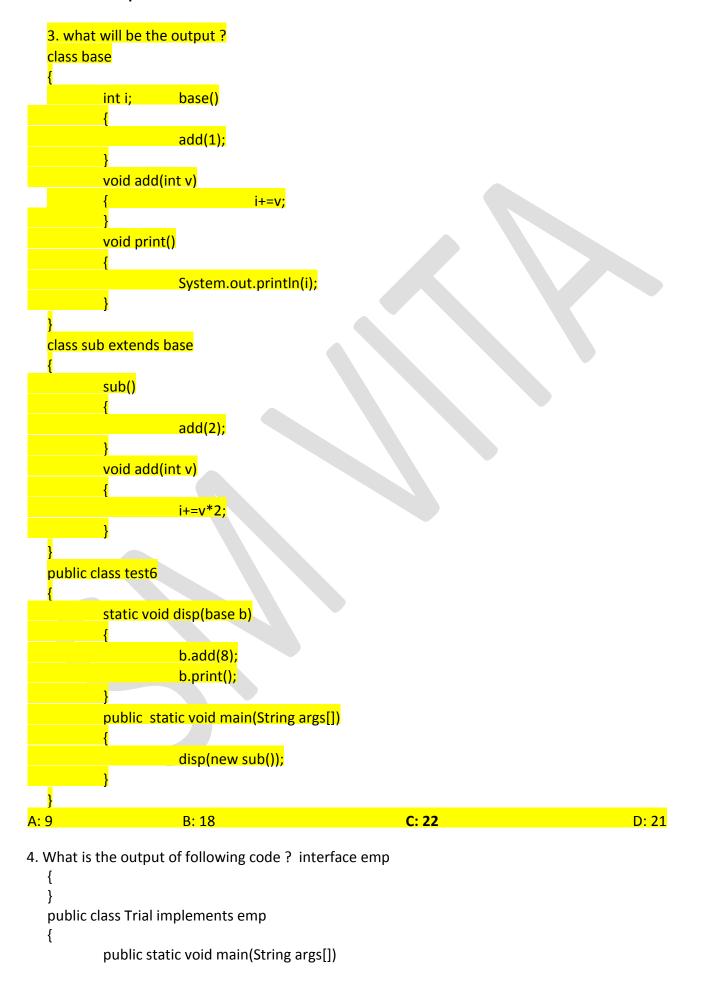

```
System.out.println(" static a");
         }
class b extends a
         static
         {
                     System.out.println(" static b");
class c extends b
         static
         {
                     System.out.println(" static c");
public class myclass
         static
    System.out.println(" static myclass");
         public static void main(String args[])
{
                new c();
                      System.out.println("in main");
         }
}
A: in main, static a, static b, static c, static myclass B: static myclass, static a, static b, static c, in main
C: static myclass, in main ,static a,static b,static c
                                                           D: static a, static b, static c, static myclass, in main
2. What will happen to the following code? class
base
public final void disp ()
System.out.println ("in disp");
public class sub extends base
public static void main (String argv [])
base b = new base(); b.disp
();
A: runtime error
```

B: compiler error "final method must be inside final class"

C: compiler error "a class having final method can not be inherited" **D: neither compilation nor runtime error**

```
Shriram Mantri
```

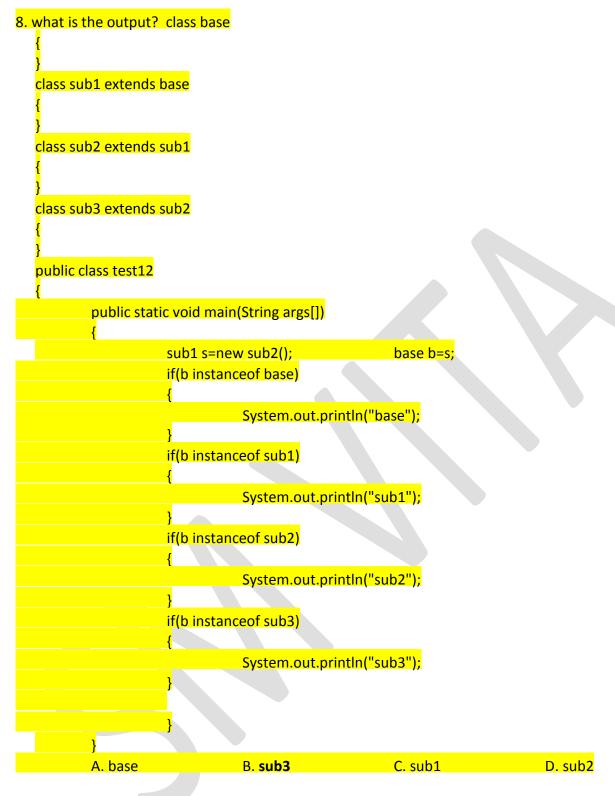

```
{
                       Trial t=new Trial();
                       if(t instanceof Trial)
                                    System.out.println("Trial");
                       if(t instanceof emp)
                                    System.out.println("emp");
                       if(t instanceof Object)
                                    System.out.println("Object");

   }
A. in main, static a, static b, static c, static MyClass
B. static MyClass, static a, static b, static c, in main
C. static MyClass, in main, static a, static b, static c
D. static a, static b, static c, static MyClass, in main
6. what will happen to the following code? class base
   {
            public final void disp()
                        System.out.println("disp");
   }
   public class sub extends base
            public static void main(String args[])
                                                              b.disp();
                         base b=new base();
```

- A. runtime error
- B. compiler error: final method must there in final class
- C. compiler error: a class having final method can not be instantiated.
- D. Neither compile time nor runtime error.
 - 7. Why multiple inheritance is not available in java?
- A. It leads to confusion for a Java program
- B. The programmer can achieve multiple inheritance by using interface
- **C.** The programmer can achieve multiple inheritance by repeatedly using single inheritance above D.All of the

```
9. Given the following code, what can be said about the statement s=(sub)b? class base
   class sub extends base
   public class test12
           public static void main(String args[])
    base b=new base(); sub s=new sub();
                       s=(sub)b;
A. legal at compile time but illegal at runtime
B. illegal at compile time
C. legal at compile and runtime ,but (sub) cast is not needed
D. legal at compile and runtime, but (sub) cast is strictly needed.
10. What will happen when you attempt to compile or run this code? class Base
   public final void amethod ()
   system.out.println ("amethod");
   public class Fin extends Base
   public static void main (String argv [] )
```

A FEB 19 Object Oriented Programming with JAVA 8 b.amethod ()

Compile time error indicating that a class with any final

methods must be declared final itself

- B. Compile time error indicating that you inherit from a class with final methods.
- C. Run time error indicating that Base is not defined as final.
- D. Success in compilation and output of "amethod" at run time

```
11. class Foo
   {
            int num;
            Bar comp=new Bar();
   }
   class Bar
   {
            boolean flag;
   class Baz extends Foo
            Bar thing=new Bar();
            double d;
}
A. A Bar is a Baz
                        B. A Foo has a Bar
                                                C. A Baz is a Foo
                                                                         D. A Foo is a Baz
E. A Baz has a Bar.
12. What will happen to the following code? interface X
            static void disp()
            {
                        System.out.println("in disp of X");
            }
   }
   public class Trial implements X
            public static void main(String args[])
                        Trial t=new Trial();
                                                            t.disp();
```

- A. Compilation error "disp not available with Trial"
- B. Compilation error "static method can not be defined inside an interface"
- C. Compilation error "Trial class must define disp as it is there inside parent interface" D. Output "in disp of X"

48. interface Z extends A, here A is
   A. class
                       B. function
                                               C. interface
                                                                                  D. none of the above.
```

50. superclass ref = new SubclassObject(), cannot access typically

PG DBDA FEB 19 Object Oriented Programming with JAVA 8

- A. Non final functions of super class
- C. Exclusive functions of sub class

- B. Final functions of super class
- D. None of the above.

Q.51 When a program class implements an interface, it must provide behavio

- A.Two methods defined in that interface.
- B. Only certain methods in an interface

C. Any methods in a class.

D. All methods defined in that interface.

52. which modifier would be used to limit the methods visibility to only the ot the current oackaae and all subclasses.

B. private C. protected A. public

53. The variables in an interface can have which modifiers?

A. Public B. Static

D. All of the above C. Final

54. To compare whether two references point to the same object we use

A. == operator B. equals function

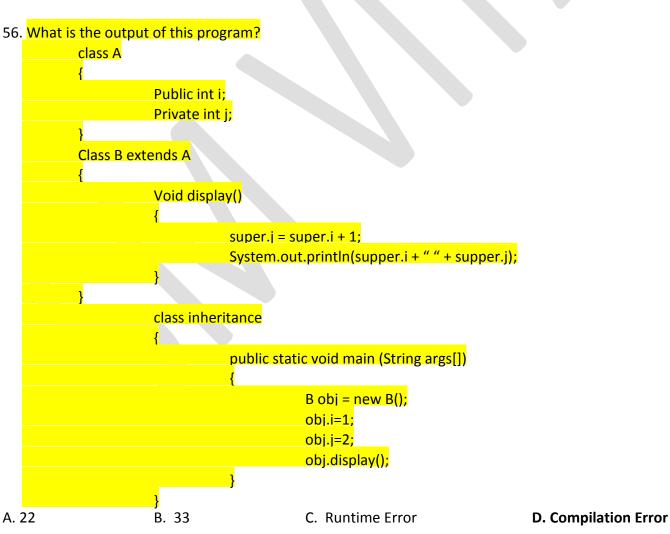

C. we can use both

D. none of the above.

D. default

55. non final functions have to be

A. overridden B. may be overridden C. A Both a and b D. None of the above

57. A class can be declared as if you do not want the class to be subclassed. Using the keyword we can abstract a class interface from its implementation

PG DBDA FEB 19 Object Oriented Programming with JAVA 8

A. protected, interface

B. final, interface

C. public, friend

D. final, protected

```
58. Select the correct statement
A. Method overloading is called compiled time polymorphism
B. Method overloading is called runtime polymorphism
C. only [B] is correct
D. Both [A] and [B] are correct
59. What is the output of the below program?
public class A
public void foo()
System.out.println("foo");
public void foo(int a)
System.out.println("foo(int)");
public class B extends A
public void foo()
foo(5);
public void foo(int a)
System.out.println("fooB(int)");
public class test
Public static void main(String[] args)
Aa = new B();
a.foo();
A. Program will not compile
                                                           C. foo(int)
                                   B. fooB(int)
                                                                                   D. foo
60. What is the output of the below program?
Public class A
            Public int a1 = 5;
            Public int a2
                                   = 6;
            Public static int a3 = 7;
```

Public static int a4 = 8;

```
Public void foo()
                        System.out.println(a1);
            Public static void foo(int a)
                        System.out.println(a2);
Public class B extend A
            Public void foo()
                        System.out.println(a3);
                        Foo(5);
                        System.out.println(a2);
            }
A. 5
B. 7
  6
  8
C. 6
D. Program will not compile
61. What is the output of the below program?

4. ∖	Which two can be used	l to create a r	new Threa	d?				

- 14
 - A. Extend java.lang. Thread and override the run method.
 - **B.** Extend java.lang.Runnable and override the start method.
 - **C.** Implement java.lang.thread and implement the run method.
 - D. Implement java.lang.Runnable and implement the run method.

- 15. What is the use of the synchronized keyword?
- A. Allows two process to run in parallel but to communicate with each other
- B. Ensures only one thread at a time may access a method or object
- C. Ensures that two or more processes will start and end at the same time

 Threads will start and end at the same time
- D. Ensures that two or more

- A. A compile time error indicating that no run method is defined for the Thread class
- B. A run time error indicating that no run method is defined for the Thread class
- C. Clean compile and at run time the values 0 to 9 are printed out
- D. Clean compile but no output at runtime

```
    Given the following,

            class MyThread extends Thread {
            public static void main(String [] args) {
            MyThread t = new MyThread();
            t.start();
            System.out.print("one. ");
            t.start();
            System.out.print("two. ");
            public void run() {

    System.out.print("Thread ");
    }

            What is the result of this code?
```

- A. Compilation fails
- B. An exception occurs at runtime. java.lang.lllegalThreadStateException
- C. Thread one. Thread two.
- D. The output cannot be determined

```
    What is the o/p of the following program?
    class MyThread extends Thread {
    public static void main(String [] args) {
    MyThread t = new MyThread();
    Thread x = new Thread(t);
    x.start(); 7. }

                                                             C. Prints: 1
     A. Prints nothing
                                      B. Prints: 0
                                                                                     D. Cant say.
                                            Oops
     1. What is the output?
     public class Trial
              int num=10;
              void change(Trial ref)
              ref.num=20;
                          ref=null;
              public static void main(String args[])
                          Trial t=new Trial();
                                                             t.change(t);
                          System.out.println(t.num);
     }
                                                                                     D: None of the above
   A: 20
                          B: 10
                                                 C: NullPointerException
2. Which of the following modifiers can be applied to Top Level classes?
                                                 C: protected
  A: public
                          B: default
                                                                         D: both A and B
```

3. Which is true about an anonymous inner class?

A.It can extend exactly one class and implement exactly one interface.

B.It can extend exactly one class and can implement multiple interfaces.

C.It can extend exactly one class or implement exactly one interface.

D.It can implement multiple interfaces regardless of whether it also extends a class.

- 4. Local inner class cannot access
 - A: outer class member
 - B: its own static member
 - C: local members of the method in which it is defined
 - D: static member of outer class

```
5. Given public static void main(String args[])
                          Integer i;
                                                  if(i==65)
                                      System.out.println("65");
                          else if(i==0)
                                      System.out.println("0");
                          }
                          else
                                      System.out.println("garbage");
     }
     A: output "0" B: NullPointerException C: Compilation error D: output "garbage"
     6. Given public class Trial (static Double d;
              public static void main(String args[])
                     if(d==0)
     {
                                      System.out.println("0");
                          }
                          else
                                      System.out.println("garbage");
     A: it will fail at runtime
                                      B: output 0
                                                              C: output garbage
                                                                                      D: compiletime error
```

- 7. Which statement is wrong?
 - A: Externalizable is child of Serializable
 - B: String class is final hence cannot be serialized
 - C: When a class implements Serializable and it is descrialized using readObject(), constructor is never invoked.
 - D: all the wrapper classes they implement Serializable
- 8. Finalize method is a method of the class
 - A: String
- B: Exception
- C: Object
- D: None of the above
- 9. Which of the following can be referenced by this variable?
 - A: The instance variables of a class only
 - B: The methods of a class only

PG DBDA FEB 19 Object Oriented Programming with JAVA 8

C: The instance variables and methods of a class D:

The class variable

10. Which statement is true about a static nested class?

A: You must have a reference to an instance of the enclosing class in order to instantiate it.

B: It does not have access to non-static members of the enclosing class.

C: its variables and methods must be static. D: must extend the enclosing class.

```
11. Which of the following methods cause the string object referenced by s to be changed?

A: s.concat()

B: s.touppercase()

C: s.replace()

D: None of the above

12. Given

{
    public static void rnain(String [] args)
    {
        PassA p = new PassA(); p.start();
    }

    void start()
    {
        long [] a1 = {3,4,5}; long [] a2 = fix(a1);
        System.out.print(a1 [0] + a1 [1] + a1 [2] + "");
        System.out.println(a2[0] + a2[1] + a2[2]);
    }
```

A: 1215

}

long [] fix(long [] a3)

a3[1] = 7'; return a3;

B: 1515

C: Compilation fails due to an error on line 3

C: 3 4 5 3 7 5

D: 375375

```
13. What is the result of the following code? import java.util.*; enum
Animals
{
    DOG("woof"), CAT("meow"), FISH("burble");
    String sound;
    Animals(String s) { sound = s; }
}
    public class test11 { static Animals a; public static void main(String [] args) {
    System.out.println(a.DOG.sound + " " + a.FISH.sound);
    }
}
A: Multiple compilation errors
B: woof burble
```

14. Inner class gets access to

A: outer class variables

B: outer class variables only if we created outer class object in inner class. C: inner class variables only D: none of the above.

PG DBDA FEB 19 Object Oriented Programming with JAVA 8

A: String	g is not a wrapper ciass: B: Integer	f .	C: Boolean		D: Characte	er

               and str3 are not equals
   d)
               compilation error
   27. Select a wrong statement about native method.
                                                   B. Native method can be abstract
   A. Native method can be static
   C. Native method can be non-static
                                                   D. Native method can be synchronized
      28. Constructor is the class that does not provide information about, and access to, a single constructor
of a class.
   A. True
                                       B. False
   29. A class cannot be both abstract and final..
   A. True
                                       B.False
   30. String s1="hello"; String s2="hello"; which one will return true
   A. s1==s2
                           B. s1.equals(s2)
                                                               C. both a and b
   32. What is the correct ordering for the import, class and package declaration when found in a single file?
   A. package, import, class
                                                   B. class, import, package
   C. import, package, class
                                                  D. package, class, import
   33. When native method resolution fails we get
   A. NativeResolutionFailedException
                                                              B. NullPointerException
   C. UnsatisfiedLinkError
                                                              D. None of these
```

34. Select the correct statement about Functional Interface.

A. It should not contain default or static methods

C. It should contain more than one abstract methods.

B. It should contain only one abstract method. D. None of these.

52

PG DBDA FEB 19 Object Oriented Programming with JAVA 8

35. Which operation is allowed on String class C. & D. && A. + 36. Using reflection u can A. Access private fields C. Both a and b B. Access private methods D. None 37. JRE contains C. dlls D. all of the above A. Jvm B. jars 38. Main() function is invoked by A. Programmer B. class loader C. jvm D. none of the above 36. Compiler which converts bytecode to native code is B. javac compiler A. Jit compiler C. byte compiler. D. none of the above 37. Data types in java are D. none of hese A. Primitive type C. both a and b B. reference type 38. What is the correct order? B. loading_linking_initializiing A. Linking loading initializing C. initializing_loading_linking D.loading_initializing_linking 39.. Address of next executing instruction is stored inside A. method area B. stack C. heap D. PC_Register 40. Method area stores information about A. Class bytecode B. static variables C. method names D. all of the above 41. In java objects are created on A. Stack C. both A & B D.none of the above B. heap 42. . Which of the following statements is true? A. Main is public B. Main is static D. All of the above C. Main accepts String[] 43. According to the new version of java, along with byte, short, int , char following type is also allowed A. Double B. float C. String D. none of the above 44. By-default value for the Reference type is: A. false B. 0 C. null D.none of these 44. Java does not support B. friend keyword C. multiple inheritance D. all of the above A. pointers 45. In java by default member functions are C. final A. static B. virtual D.all of the above 46. Just before object gets garbage collected following method is called A. finalize() B. gc() C. main() D. none of the above

47. In java the rule is

PG DBDA FEB 19 Object Oriented Programming with JAVA 8

A. member variable must be initialized before use

B. local variable must be initialized

before use

D. none of these C. both a and b

- 48. What will happen if static modifier is removed from the signature of the main method?
- A. Compilation Error.
- B. RunTime Error: NoSuchMethodError.
- C. Program will compile and run without any output.
- D. Program will compile and run to show the required output.
- 49. Under what conditions is an object's finalize() method invoked by the garbage collector? A. When it detects that the object has become unreachable.
- B. As soon as object is set as null.
- C. At fixed intervalm it checks for null value.
- D. None of the above.
- 50. Can constructor be inherited?

A. True

B. False

- 51. Under what conditions is an object's finalize() method invoked by the garbage collector? A. Just before B. As soon as object is set as null. object gets garbage collected.
- C. At fixed intervalm it checks for null value.
- D. None of the above.

```
52. What is the output? public class test10
             static void call(int x)
                                     x+=2;
             public static void main(String args[])
                         int num=0;
                         call(num++);
                         System.out.println(num);
    A. 1
                         B. 2
```

C. 3

D. 0

- 53. Which of the following is the correct syntax for suggesting the JVM performs garbage collection.
- A. System.free ();
- B. System.setGarbageCollection ();
- C. System.out.get ();
- D. System.gc ();
- 54. Which of the following is not primitive data type?
- A. int
- B. Boolean
- **C.String**
- D. float

- 55. Static member scope is
- A. They are created when the class is loaded at runtime.
- **B.** They are created when main get called.
- **C.** They are created when class object get created.
- **D.** They are created when class get modified.

PG DBDA FEB 19 Object Oriented Programming with JAVA 8

Select the one correct answer

- A. The code will fail to compile since the constructor is trying to access static members
- B. The code will fail to compile since the constructor is trying to use static field "a" before it has been initialized.
- C. The code will fail to compile since the constructor is trying to use static field "b" before it has been initialized
- D. The code will fail to compile since the constructor is trying to use static field "c" before it has been initialized.
- E. The code will compile and run without any problems.

```
57. What will happen if you compile/ run the following code? public
class Q 11
{
static String str1»= "main method with String[] args";
static String str2 = "main method with int[] args";
public static void main(String[] args) {
System.out.println(str1); .
public static void main(int[] args)
System.out.println(str2);
} }
A. Duplicate method main(), compilation error at line 6.
B. Duplicate method main(), compilation error at line 11.
C. Prints "main method with main String[] args".
D. Prints "main method with main int[] args".
58. What is the output of the following code?
class Test
{
Test(int 1')
System.outfprintln("Test(" +i +")");
}
}
public class Q12
```

```
static Test t1 = new Test(1);
   Test t2 = new Test(2); static
   Test t3 = new Test(3);
   public static void main(String[] args)
   Q12 Q = new Q12();
   }
   }
   A. Test(1)
   Test(2)
   Test(3)
   B. Test(3) Test(2)
   Test(1)
   C. Test(2)
   Test(1)
   Test(3)
   D. Test(1)
   Test(3)
   Test(2)
   59. What is the output of the following code?
   String str = "Welcome"; si;r.concat(" to
   Java!");
   System.out.println(str);
   A. Strings are immutable, compilation error at line 3.
   B. Strings are immutable, runtime exception at line 3.
   C. Prints "Welcome".
   D. Prints "Welcome to Java!".
   60. What is the output of the following code? class
   MyClass "
   {
   static int maxElements; MyClass(int
   maxElements)
   this.maxElements = maxElements;
   }
   }
   public class Q19
   public static void main(String[] args)
   MyClass a = new MyClass(100); MyClass
   b = new MyClass(100); if(a.equals(—)
   System.out.println("ObJects have tne
   same values;, else '
   System.out.println("Objects have different values");
      A. Compiles error at line 20 equals () method was not
defined.
              B. Compiles fine, runtime exception at line 20
```

C. Print "object have the same values". D.

```
Print "object have the different values";
61. What will happen if you compilel run the following code?
            public class Q21
int maxElements;
           void Q21()
                        maxElements = 100; '
                       System.out. println(maxElements);
Q21 (int i)
{.
maxElements = i;
System.out.println(maxElements);
}
public static void main(String[] args)
\{ Q21 a = new Q21(); \}
Q21 b = new Q21(999);
}
}
A. Prints 100 and 999.
B. Prints 999 and 100.
C. Compilation error at line 3, variable maxElements was not initialized.
D. Compilation error while calling parameterized constructor
62. What will happen if you invoke the following method? public
void check()
System.out.println(Math.min(-0.0,+0.0));
System.out.println(Math.max(-0.0,+0.0));
System.out.println(Math.min(-0.0,+0.0) == Math.max(0.0,+0.0));
A. prints -0.0, +0.0 and false.
                                                           B.prints -0.0, +0.0 and true.
C.prints 0.0, 0.0 and false
                                                           D. prints 0.0, 0.0 and true
63. What will be the output of the followingicode?
            String s1 = "Java2";
1.
2.
            String s2 = "Java2";
            if (s1 == s2)
3.
            System.out.println("We are twins");
4.
5.
            System.out.println("We are not twins");
A. We are twins
B. We are not twins
C. The program will not compile.
D. The program will compile, but will produce a run-time error.
```

E.

```
64. In the following code, which is the earliest statement, where the object originally held in
 e, may be garbage collected: public class Test { public static void main (String'a"Fg§[]){ Employee e
 = new Employee("Bob", 48); e.calculatePay();
 System.out.println(e.printDetails()); _ e
 = null;
 e = new Employee("Denise", 36);
 e.calculatePay();
 System.out.println(e.printDetails());
 }
 A. Line 7
                        B. Line 8
                                                            C. Line 10
                                                                                    D. Line 11
 Never
 65, non static variables are defined in
                                                 C. both 1 and2
                                                                                    D. none of the above.
    A. functions
                        B. classes
 66. String objects are
    A. mutable
                        B. immutable
                                                 C. all the above
                                                                                    D. None of the above
 67. toString function is a non final method of
    A. keyword
                                                 B. method of String class
    C. method of Object class
                                                 D. None of the above
 68. converting primitives to objects is called as
    A. Conversion mechanisms
                                     B. Boxing
                                                            C. Object Conversion
                                                                                     D.none of the above
 69. if we make constructors as static functions
    A. compile time error
                                     B. runtime error
                                                            C. coding error
                                                                                     D. None of the above
 70. non
    static
     varia
     bles
     are
    for
    A. objects
                         B. functions
                                                 C. both 1 and 2
                                                                        D. none of the above
 71. class
    Α
    {
    int I;
        public void m1()
        System.out.println("value of i is" + i);
    public class Code1
    public static void main(StringO args) {
```

```
A obj = new A(); A obj1 = new A(); obj.I = 3; obj1.
       System.out.prIntln{obj1.i +·" + obj.I);
   this program will print
  A. 3,4 B. 4,3 C. compilation error D. runtime error.
72. class
   Α
   {
       public void m1()
       System.out.println("1");
       public static void m2()
        m1(); System.out.prinUn("2");
   when we call m2 function, here output will be
A. 1, 2
                        B. 2, 1
                                                C. runtime error
                                                                                    D. compile time error
74. What is the output of following println statement
String str1 = "Hellow";
           System.out.println(str1.indexof('t'));
                        B. can't be predicted
A. 0
                                                            C. -1
                                                                                                D. 5
   75. What could be output of the following fragment of code?
          public class Test
            {
                        Public static void main (String args[])
                                    string x = "hellow";
                                    int y = 9;
                                    System.out.println(x += y);
   A. throws an exception as String and int are not compatible b)
   c) Compilation error
   d) None of these
   76. What will be the output of the following fragment of code?
            public class Test
                        public static void main(String [] args)
```

```
{
                                    String s1 = "java";
                                    String s2 = "java";
                                    System.out.println(s1.equals(s2));
                                    System.out.println(s1 == s2);
                        }
            }
   A. false true
                        B. false false
                                                             C. true false
                                                                                     D. true true
   77. Determine output
            public class Test
                        public static void main(String args[])
                                    String str = null;
                                    if (str.length() = = 0)
                                                System.out.print("1");
                                    } else if (str == null)
                                    { System.out.print("2");
                                    } else {
                                                 System.out.print("3");
                        }
            }
                                    B. "1" is printed
   A. compilation fails
                                                                                     C. "2" is printed
   D. "3" is printed
                                    E. An exception is thrown at runtime
   78. What could be output of the following fragment of code?
            public class Test
                        Public static void main (String args[])
                                    string x = "hellow";
                                    int y = 9;
                                    System.out.println(x += y);
A. throws an exception as String and int are not compatible
B. hello9
C. Compilation error
D. None of these
79. class base
protected:
int a,b; public:
void setab(int
```

```
n, int m) (a=n;
b=m;)
};
class derived zprotected vase
{ int c; public: void
setc(int n) {c=n;}
};
referring to the sample code above, how can you access the int member "a" in class derived? A.
using member functions of base only.
B. only by using friend functions.
C. using member functions of derived only.
D. by using member functions of derived and base
E. by using any function.
80. Study the below program
Public class Singleton
{
            Public static final Singleton instance = new Singleton();
            Public Singleton()
            {
            Public static Singleton getInstance()
                        return instance;
            Public void foo()
            }
Public class Test
            Public static void main(String[] args)
                        Singleton a = new Singleton();
                        Singleton b = Singleton.getInstance();
                        b.foo();
            }
Which of the numbered lines is a problem?
A. 1
                        B. 3
                                                C. Both
                                                                                    D. None
81. If an instance of class A is created in what in what order will the numbered lines be hit public
class A
{
            public int a = 1;
1:
            Public A()
{
2:
            a = 2;
}
```

PG DBDA FEB 19 Object Oriented Programming with JAVA 8

```
{
3:
           a = 3;
}
                                                                     C. 213
A. Class will not compile
                                              B. 132
                                                                                            D. 21
82. How many times will be the line numbered as 1 be hit?
Public class A
           Public static int a =1;
           Public A()
                       a = 2;
           Static
                       a = 3;
}
Public class Test
           Public static void main(String[] args)
                       Aa1 = null;
                       A a2 = new A();
           }
                                              B. 1
A. Program will not compile
                                                                     C. Never
                                                                                            D. 4
83. What is the super class of integer?
A. Object
                       B. Numeric
                                                         C. Number
                                                                                            D. Short
84. What is the name of the concept by which I can assign an int directly to an Integer?
A. Casting
B. Auto Assignment
C. Auto boxing
D. It is not possible. Primitive type cannot be assigned to objects
                                  SOCKET PROGRAMMING
```

1. Which of the following class allows Tcp Server to wait for client on a particular port?

A: InetAddress

B: ServerSocket

C: Socket

D: none of the above

2. One of the following port range is valid for Network programming in java

A: 1 to 65535

B: 1023 to 65535

C: 1024 to 65535

D: 0 to 1023

3. Which one is used to send packet over the network in case of UDP?

A: DatagramPacket

B: Socket

C: DatagramServer

D: DatagramSocket

4. Which of the following is Application level protocol?

PG DBDA FEB 19 Object Oriented Programming with JAVA 8

	A: FTP	B: HTTP	C: JRMP	D: all of th	ne above
5.	. A is an endpo	oint for communica	ation between two	machines.	
	A. ServerSocket	B. Socket		nSocket D. Datagra	ımPacket
6.	. Which of the following	_		client on a particular _l	port?
	A: InetAddress C: DatagramPacket		tagramSocket ne of the above		
	C. Datagrammacket	D. 110	ne or the above		
7.	. One of the following o	class is used to repr	resent IP address o	f a machine.	
	A: IPAddress	B: Ine	etAddress (C: InternetAddress	D: InternetPacketAddress
8	. Which method is used	to wait for client t	to get connected in	TCP?	
0.	A: accept	. to wait for elicite	to Bet connected in	1101,	
	B: receive				
	C: wait				
	D: socketWait				
	9.Which of the followi	- ::	·		
	A: TCP	B: HTTP	C: UDP	D: all of th	ie above
	10. The class which is	used to send the n	acket in case of UF)P is	
			C. UserDatagramPa		tagramSocket
			o. 000. 2 a tag. a	2. 333.24	
	11. The class which	h represents IP ado	dress of machine is		
	InternetAddress				
	IPAddress				
	InetAddress				
D.	none of the above				
12.	. Which is Application l	aver			
	HTTP	aye.			
	FTP				
C.	SMTP				
D.	all of the above				
40					
	method is use	ed to wait for client	request in UDP		
	Wait receive				
	accept				
	none of these				
υ.	none of these				
14.	method is use	ed to wait for client	request in TCP		
A.	Wait				
	receive				
	accept				
D.	none of these				
15.	. If we want to pass an	object over netwo	rk it should implen	nent	

A. RunnableB. **Serializable**

PG DBDA FEB 19 Object Oriented Programming with JAVA 8

	Cloneable none of these
A. B. C.	class is used to make server wait for client request in TCP. Socket ServerSocket SocketInputStream none of these
A. B. C.	Valid range of port number for a java application is 0 to 65535 1 to 65535 1024 to 65535 none of these
А. В.	Marshalling is Converting packets into data converting data into packets converting bytes into character
19.	TCP is reliable A. True B. false
20.	What will be printed out if you attempt to compile and run the following code? int i=9; switch (i) { deiault: System.out.println("default"); cazse 0: Sy:stem.out.println("zero"); break; case 1: System.out.println("one"); case 2: system.out.println("two"); } a) default b) default, zero c) error default clause not defined d) no output displayed 21. Which of the following lines will compile without warning or error. a) float f=1.3; b) char c="a"; c) byte b=257; ' d) boolean b=null; e) int i=10; 22. How to terminate JVM when I close all the application windows?
	a. Systemexit(u) b. System.exit(1) c. 3ystem.exit(2) d. All are invalid answers
	Extra MCQ Q.1) How many files are created after compiling following code class Test1 {} class Test2 {}

public class HelloWorld

PG DBDA FEB 19 Object Oriented Programming with JAVA 8

```
{
public static void main(String[]args)
       System.out.println("Good luck!");
a) HelloWorld.class
                                                     b) HelloWorld.obj
c) Test1.class, Test2.class, HelloWorld.class
                                                     d) HelloWorld.obj, test.obj, test2.obj
Q.2) What is true about class in java
a) Class can be defined as private if it is a inner class
b) In java by default class is default
c) class can be declared static in java
d) All The Above
Q.3) What is the output of following code
class test1
public static void main(Stringa[])
       int i;
       while(i<10)
       System.out.println("hello");
       i++;
}
a) compilation error, variable not initialized
                                                                    b) infinite time hello will be printed
c) OutofStackOverflowException will be printed
                                                             d) hello will be printed only once
Q.4) What is true about interface in java 8
a) Interface can have variables and abstract method
b) Interface can have static methods
c) Interface can have default method with body
d) All the above
Q.5) What is the output of following code
abstract class vehicle
Void show();
class test ectends vehicle
void show2() { }
a) compilation error class test must be abstract
b) Runtime error
c) code will eun without error
d) None of these
```

Q.6) Which of the statement is correct about static

a) Variable can be declared as static

b) methods can be declared as static

PG DBDA FEB 19 Object Oriented Programming with JAVA 8

c) Class can be declared as static

d) All of the above

```
Q.7) What is the output of following code
final class test1
final void show()
System.out.println("Welcome");
public static voidmain(String ss[])
test1 t = new test1();
t.show();
}}
a) welcome will be printed
                                                    b) final class cannot have methods
c) cannot define body of final method
                                                    d) final class cannot be instantiated
Q.8) What is the output of following code
string a = "welcome";
System.out.println(a.charAt(7));
a) character 'e' will be printed
                                                    b) StringIndexOutOfBoundsException will be
raised
c) No Output
                                                    d) IndexOutOfBoundsException will be printed
Q.9) What is the result of compiling and running the following code?
publicclass Test
public static void main(String argv[])
               int a = 6;
       if (a = 6)
       System.out.print("true");
}
a) no output is produced
                                     b) true
                                                    c) compilation error
                                                                                  d) Runtime error
Q.10) What is the output of following code
final int p = 100;
System.out.println(p+10);
a) compilation error
                              b) 110
                                             c) Runtime error
                                                                           d) None of these
Q.11) Which of these operators is used to allocate memory to array variable in Java?
a) malloc
                                                    c) new
                                                                           d) new malloc
                              b) alloc
Q.12) What is the output of following code
interface test
Static void show()
{ System.out.println("testing"); }
}
```

```
Class tesr2 implements test {}
a) No error code will run properly
                                                    b) compilation error
                                                    d) Interface method cannot have body
c) Runtime error
Q.13) What is the output of following code
Class test1
Public static void main(String r[]) throws Exception
{
try
              { throe new Exception ();
finally { System.out.println("finally block"); }
a) finally block will be printed then exception will occur
b) compilation error
c) program will terminate after printing exception
d) No output
Q.14) What is the output of following code
int y=10;
System.out.println(y ==(int t)10.5);
                                                           d) o will be printed
a) true
               b) false
                              c) compilation error
Q.15) What is incorrect about instance variable in java?
a) Instance variable are defined outside class
b) Instance variable are initialized when class is instantiated
c) Instance variable can be accesses from method or constructor
d) None of these
Q.16) What is the output of following code
class test
{
test()
System.out.println("Welcome to PGDBDA");
void show()
System.out.println("testing");
public static void main(String a[])
new test().show();
a) Compilation error b) welcome to PGDBDA testing
                                                                   c) testing
                                                                                  d) Runtime error
Q.17) Which of these cannot be declared static?
a) class
                      b) object
                                                    c) Local
                                                                          d) method
Q.18) Which of the following statements about static variable is false?
a) static methods can call other static methods only
b) static methods must only access static data
```

PG DBDA FEB 19 Object Oriented Programming with JAVA 8

c) static methods can not refer to this or super in any way

Q.25) Which of the following is used to call stored procedure?

a) Statement

c) CallableStatement

b) PreparedStatement

d) CalledStatement

d) when object of class is declared, each object contains its own of static variable

```
Q.19) What is the output of this program?
class Output {
public static void main(String args[])
{
       int a[] = \{1,2,3,4,5\};
       for (int i=0; i<a.length-2; ++i)
       Syste.out.rintln(a[i]+"");
}
}
a) 12
                                                            c) 1234
                              b) 123
                                                                                          d) 12345
                              keywords is used to prevent content of a variable from being modified?
Q.20)
a) final
                                                    c) constant
                      b) last
                                                                                   d) static
Q.21) Java is object oriented programming language is support all the fundamental concept
                              b) Inheritance
                                                    c) Polymorphism
                                                                                   d) All the above
a) Encapsulation
Q.22) Which statement is incorrect about constructor in java?
a) A constructor are having same name as of class
b) Every class has constructor
c) Constructor can be defined private
d) None of these
Q.23) import java.util.*;
class Collection_interators
public static void main(String args[])
       LinkedList list = new LinkedList();
       list.add(new Integer(20));
       list.add(new Integer(80));
       list.add(new integer(50););
       list.add(new Integer(10));
       Iterator i = list.iterator();
       i.next();
       i.remove();
       while(i.hasNext());
       System.out.print(i.next() + " ");
}}
a) 80 50 10
                                                                           d) Compilation error
                      b) 20 80 50 10
                                                    c) 20
Q.24) Which exception is raised when a number is divided by zero
a) arithmaticException
                                             b) IOException
c) DivideByZeroException
                                             d) NoException will be raised
```

PG DBDA FEB 19 Object Oriented Programming with JAVA 8

Scala

(PS: Please note Scala is not part of the curriculum)

- Q.1 Select the correct statements about the apply and unapply methods.
- a. apply lets us create an object from arguments
- b. These are methods of an extractor object
- c. unapply lets us take an object apart
- d. All of these
 - Q.2 We can have static members in classes.
 - a. False
- b. True

```
Q. 3 Consider the following List: var countries=List("brazil",
"argentina", "colombia") What does the following code do to it?
println{
    countries.reduceLeft[String] { (c1: String, c2: String)=>

    s"$c1, $c2"
    }
}
```

- a. It prints List("brazil", "argentina", "colombia")
- b. It prints brazil, argentina, colombia
- c. It prints "brazil", "argentina" "argentina", "colombia"
- d. It prints "\$c1, \$c2"
 - Q. 4 What Boolean value do the following statements return? case class People(name:String,age:Int) val people1=People("Ayushi",22) val people2=People("Ayushi",22) people1==people2 a. False b. True
 - Q. 5 Every class in Scala inherits from a super class. Implicitly, this is scala. Any Ref.
 - a. False
- b. True
- Q. 6 What is the output of the following code?

```
class User(n:String){ val
name:String=n } var u=new
User(n="Frankl") println(u.name)
```

- a. This compiles, but prints nothing
- b. This does not compile; throws an error
- c. None of the above
- d. This prints Frankl
- Q. 7 Which of the following statements are true about Either?
- a. We can use it to deal with possible missing values
- b. All of these
- c. It is a sealed abstract class
- d. An instance of Either can be an instance of Left or Right

```
Q. 8 Select the correct output: val cool=Map("a"->"aaa", "b"->"bbb", "a"->"ccc") println(cool("a"))
```

```
b. "aaa"
                                             c. "a"
                                                           d. "bbb"
   a. "ccc"
                                                                                 for(i<-
  Q. 9 Select the correct output: val numbers=List(11,22,33) var total=0
  numbers){ total+=i
                               }
    println(total)
         a. 0
                               b. 11
                                             c. 66
                                                           d. 33
  Q. 10 Decide what the following code prints: val odds=List(3,5,7) var result=1
    odds.foreach((num:Int)=>result*=num)
   println(result)
   a. 105
                        b. List(105)
                                             c. 1
                                                           d. List(3,5,7)
   Q.11 What is a type class in Scala?
         A companion class
         None of these
   b.
         A trait with at least one type variable
   c.
         A class that performs boxing of a certain data type
   d.
   Q.12 Of the following, select the Scala construct that holds pairwise different elements of the same type.
         Groups
                                                           c. Sets
   a.
                               b. Forums
                                                                                 d. Maps
   Q.13 What does this code do?
    object DoubleUtils{
   implicit class Funny(val num: Double, joke: String){ def
   knockKnock={
    s"${num.toString} is here"
    }
   }
   import DoubleUtils. println(3.14.knockKnock)
  a. It prints "3.14 is here"
                                        b. None of these
  c. It causes the compiler to crash
                                        d. It throws an error
  Q.14 A closure is:
a. A function that returns, as argument, another function
b. A function that takes, as argument, another function
c. A function that returns a Future
d. A function whose return value depends on a variable declared outside it
Q.15 Select a regular expression from the options that will parse out the number from the following string:
  "Milton Friedman died at 94 years of age."
  a. None of the above
                                 b. "[0-9]*".r
                                                      c. "[0-9]".r
                                                                           d. "[0-9]+".r
  Q.16 What does the following code print?
   trait Diva{
               var attitude=
  "subjective"
   a. subjective
                                        b. The code throws an error
                                                                         c. None of these
```

PG DBDA FEB 19 Object Oriented Programming with JAVA 8

- a. All of these
- b. We can call Scala from Java and Java from Scala
- c. Both run on the JVM
- d. Both work with popular IDEs like Eclipse, Netbeans, and IntelliJ
 - Q.18 Select the correct statements for Nil, Null, None, and Nothing.
- a. Nothing is the bottom type of the entire type system
- b. Both None is the value of an Option with no value in it & Nothing is the bottom type of the entire type system
- c. Nil denotes the absence of a value
- d. None is the value of an Option with no value in it
 - Q.19 What does type inference mean?
- a. Scala determines a variable's type by looking at its value
- **b.** We must explicitly mention the data type for a variable
 - Q.20 Select the correct statements from the following:
- a. Unit is the same as Null
- b. () is an empty tuple that represents a Unit
- c. Both Unit is like void in Java & () is an empty tuple that represents a Unit d. Unit is like void in Java

```
Q. 21 The following code compiles:
Complex(real:Double,imaginary:Double){    def re()=real
 def im()=imaginary
a. False
                        b. True
Q.22 Now, consider this list: var rrr= List("ant", "beer",
"battered", "cool", "burger") What will this code do to it?
Select what it prints.
 rrr.filter {(w: String) =>
w.take(1) == "b"
 }.
 ReduceLeft
                           s"$a $b"
 (a: String, b: String) =>
a. beer battered burger
                                                     b. ant eer attered cool urger
c. eer attered urger
                                                     d. ant beer battered cool burger Feedback
Q.23 Select the output for the following line of code:
 println(40.getClass)
a. 40
        b. int
                       c. This causes a runtime error
                                                             d. This causes a compilation error
Q. 24 Scala is a portmanteau for:
a. Scalar and Language
                                b. Scalable and Language
c. Script and Language
                                d. Sequential and Language
```

Q.25 The following technique/construct lets us transform a function with multiple arguments into a chain of functions. Each of these has one single argument.

- a. Currying
- b. Traits
- c. Trait mixins
- d. Extractors

PG DBDA FEB 19 Object Oriented Programming with JAVA 8

Q.26 Select the true statements from the following:

- a. We can complete a promise only once
- b. All of these
- c. A promise is a writable container that completes a future
- d. A Future is an object
- e. A Future holds a value that may become available at a later point in time
 - Q.27 How do you abruptly stop execution in the REPL?
 - a. Pressing Ctrl+W
- b. None of the above
- c. Pressing Ctrl+Q
- d. Pressing Ctrl+C

```
Q.28 Choose the correct output:
                                 object Dog{
def bark="woof"
Println(Dog.bark)
```

a. It prints nothing c. It raises an exception b. None of the above

d. It prints "woof"

Q.29 A class inheriting from a trait and implementing its interface inherits all code in it.

a. False

```
Q.30 What does this code print? val numbers= Map(1-
>"one", 2->"two", 3->"three") val odds= numbers-2
println(odds)
```

- a. This code throws a TypeMismatchException
- b. Map(-1->"one", 0->"two", 1->"three")
- c. Map(1->"one", 3->"three") (Correct)
- d. None of the above
 - Q.31 Which of the following statements is untrue about a functor in Scala?
- a. It is a built-in construct in Scala
- b. None of the above
- c. It maps objects or entities of one category to those of another
- **d.** It is a mapping between categories
 - Q.32 UNIT is a data type in Scala. It pertains to no meaningful information.
- b. True

Q. 33 Select the correct output for the following code:

```
object Flash{
              def superpower="speed"
```

var f=new Flash println(f.superpower)

a. This prints nothing b. None of these

c. This prints "speed"

d. This throws an error

Q.34 sbt is an open-source build tool for Scala and Java projects. Can it execute tasks in parallel?

- a. No, it can only execute one task at once
- b. Yes
- Q. 35 Which of the following statements are true about Lists and Arrays?
- a. Once you have declared a List, you cannot add more elements later
- b. All of these
- c. Lists are immutable
- d. Arrays are mutable

PG DBDA FEB 19 Object Oriented Programming with JAVA 8

Q.36 Select the statements that will successfully compile and run:

e
,

- b. var msg="Testing" println("msg is :"+(msg=msg+" " +msg)
- c. var msg="Testing" println(msg+" a test")
- d. val msg:String = "Testing" println(msg+" a horse ");

Q.37 Scala is also a:

a. Cloud Computing Language

b. Scripting Language

c. None of these

d. Style Sheets Language

Q. 38 Left and Right are case classes. True or False?

a. True

b. FalseYour answer is incorrect.

Q. 39 We do not need to pass these parameters to a method when calling it:

a. Command-line arguments

b. Named arguments

c. Default parameters

d. Implicit parameters

Q.40 Omitting a semicolon(;) at the end of a statement causes the compiler to throw an error.

a. False

b. True

Q.41 What does this code print?

var y:Option[String]=None

y.get

a. This throws an exception

b. This prints None

c. This prints nothing

d. None of the

Q.42 Its Java compatibility makes Scala suitable for:

a. Android Development

b. Google Development

c. Apple Development

d. Microsoft Development

Q.43 Select the correct value specified by the following line of code: "abcde" ensuring (.length>3)

a. abcd

b. abc

c. The code throws an error

d. abcde

Q. 44 Select appropriate output: def quadruple(x:Int):Int=x*4 val quadrupleCopy=quadruple _ println(quadrupleCopy(-1))

a. -4

b. 20

c. The code throws an error

d. 0

Q. 45 Choose the correct output:

var greeting:Option[String]= Some("hello") greeting=

Some(7)

println(greeting.get)

a. It prints 7

b. None of these

c. It prints "hello"

d. It throws an error

Q.46 What is a higher-order function in Scala?

a. It returns a function as a result

b. None of these

c. It takes other functions as parameters

d. Both a & b

Q. 47 The following statements are true about companion objects and companion classes:

- a. A companion object is an object with the same name as a class
- b. Companion classes and objects can access private members of their companions
- c. The companion class-object pair can reside in different source files
- d. Both A companion object is an object with the same name as a class & Companion classes and objects can access private members of their companions

PG DBDA FEB 19 Object Oriented Programming with JAVA 8

Q.48 Which of the following is not a way to make an executable Scala program?

- a. Use an IDE
- b. None of the above is not a way for the said purpose
- c. Execute a script file in the interpreter
- d. Compile an object with a main method

Q.49 Select the correct output for the code: val arr=Array(2,3,4) arr.update(1,5)

- a. Line 2 throws an error at the time of compilation
- b. arr now holds (2,5,4)
- c. arr is a val; we cannot reassign it. So, this throws an error
- d. None of the above

```
Q.50 Select the correct output:
  object Whatever{    def speak(something: String)(implicit
  nice: String)={       println(s"$something $nice")
    }
  }
  implicit val nice= "the walrus"    println
  {
    Whatever.speak("I am")
  }  println{
    Whatever.speak("I like")("catfood")
  }
}
```

- a. I am the walrus I like the walrus I am the walrus I like the walrus I am the walrus I like the walrus
- b. The code throws an error
- c. I am the walrus the walrus catfood
- d. I am the walrus I like catfood
 - Q. 51 What does the variable x hold in the following code: var x, y, z=(1,2,3)
 - a. 1
- b. None of the above
- c. (1,2,3)
- d. The code produces an error
- Q.52 Which of the following is a type of literal in Scala?
- a. String literal
- b. All of these
- c. Boolean literal
- d. Symbol literal
- Q.53 Consider the following statements about vals and vars. Select the ones that are true.
- a. Reassigning to a var doesn't throw an error
- b. All of these
- c. A val is a constant
- d. Reassigning to a val throws an error
 - Q. 54 Which is the correct value of the following expression?

List(1,2,3) flatMap(x = > List(x,4))

- a. List(1,4,2,4,3,4)
- b. List(1,2,3,4)
- c. List (1,2,3,x,4)
- d. List(4,4,4)

Q.55 Select the correct output for the following code: val

leaders=collection.mutable.Buffer("Reykon")

leaders+="obama" println(leaders)

- a. ArrayBuffer(Reykon, Obama)
- c. ArrayBuffer(Reykon)

- b. List(Reykon)
- d. The code throws an error

PG DBDA FEB 19 Object Oriented Programming with JAVA 8

Q.56 What is a monad in Scala?

a. An object that wraps another	b. A singleton object
c. None of these	d. A function with a single parameter

Q.57 Looking at the previous code, can you predict the output of the following code? val stuff=collection.mutable.Buffer("blue")

stuff+=44 println(stuff)

a. The code throws an error (Correct) b. Something else c. ArrayBuffer(blue, 44) d. ArrayBuffer(blue)

Q. 58 Functions and numbers are objects in Scala.

a. False

b. True

Q.59 One of the following is not a kind of Scala identifier. Select the one.

a. String identifier b. Ope

b. Operator identifier

c. alphanumeric identifier

Q.60 What about this one? println("frankl" | | true)

a. True b. The code doesn't print anything

c. False

d. This code throws an error

Q. 61 Which of the following function definitions are erroneous?

a. def functionName(x:Int,y:Int):Int{x+y} ()
b. def functionName(x:Int,y:Int):Int={return x+y}

c. def functionName(x:Int,y:Int)={x+y}

d. def functionName(x:Int,y:Int):Int=x+y

Q.62 Select the correct statements about Array and ArrayBuffer.

a. An ArrayBuffer is of variable size b. Arrays are immutable

c. Arrays are similar to Java's ArrayLists d. ArrayBuffers are similar to Java's arrays

Q. 63 Without an explicit import, maps in Scala are by default:

a. Mutable

b. Immutable

Q.64 We use the following keyword to define a function in Scala:

a. def

b. function

c. func

d. We use the data type instead

Q. 65 Select the correct statements from the following:

a. We must manually define accessor methods for all constructor arguments

b. We must generate methods equals(), hashcode(), and toString()

c. Case classes allow pattern-matching

d. We must use the new keyword to instantiate a case class

Q.66 Is the following function pure? def change:Unit={ x=x+10 }

a. It is pure b. It isn't pure

Q. 67 Tell us the output of the following snippet of code: case class

Dog(breed: String, age: Int)

val fido= new Dog("lab", 4) println(fido.toString)

a. It prints "lab" b. None of these c. It raises an exception d. It

prints Dog(lab, 4)

PG DBDA FEB 19 Object Oriented Programming with JAVA 8

Q. 68 A collection of type collection. a. True b. False Q.69 Choose the correct output for the following code: x:Option[String]=Some("hi") println(x.get) a. This prints nothing b. This prints Some("hi") c. This prints "hi" d. The code throws an error Q.70 Which abstraction from functional programming helps us deal with updating complex immutable nested objects? a. Case classes b. Lens c. None of these d. Extractors Q. 71 For which kind of data should you use a case class? a. None of these b. Both Mutable data & Immutable data c. Immutable data d. Mutable data Q. 72 How do you turn the string "batmanstein" to the string "Man"? **a. "batmanstein".drop(3).take(3).capitalize** b. "batmanstein".take(3).capitalize.drop(3) c. "batmanstein".drop(3).capitalize.take(3) d. "batmanstein".take(3).drop(3).capitalize Q.73 What is Scala's programming paradigm? a. Statically-typed b. All of these c. Functional d. Object-Oriented Q.74 Select the true statements about iterators. a. To get the next item, we use next() b. They yield the next element in the iterator c. All of these d. We can use the method hasNext to find out if it has another element left Q.75 What does the following piece of code print? case class PersonData(name: String, age: Int) val bob1= new PersonData("bob", 99) val bob2= new PersonData("bob", 99) println(bob1==bob2) a. True b. It throws an exception c. False d. It throws an error Q.76 Consider the following string. val s= "(888) 333-4444" How would you replace all digits with the letter 'x'? b. s.replaceAll("x", "[0-9]") a. s.replace("x", "[0-9]") c. s.replace("[0-9]", "x") d. s.replaceAll("[0-9]", "x") Q.77 Okay, now try to do this one: val evens=List(2,4,8) println{ evens.foldLeft(0) { (memo: Int, y: Int) => memo+y

}

PG DBDA FEB 19 Object Oriented Programming with JAVA 8

a. 14	b. 2	c. List(14, 12, 8)	d. List(8,4,2)				
Q. 78 Does this code code sad="meow" valuetCry=sad println(code)	ompile successfully? Doo	es it print anything	?				
a. It does not compile	• • • • • • • • • • • • • • • • • • • •		b. None of these				
=							
c. it complies successf	fully and prints "meow"		d. It compiles but pr	oduces no output			
Q.79 Select the correct var band={ var name="sublime" name } println(name) a. It prints nothing b. None of the above c. It prints "sublime"	t output for the followin	g code:					
d. The code raises an	orror						
u. The code raises an	error						
Q.80 Scala is case-inse a. False b. Tru	ensitive. Identifiers Name ue	e and name are the	same thing.				
Q.81 Programming lang paradigms is	uage which uses both ob	eject-oriented prog	ramming and function	al programming			
a.Scala	b. Ada	c.Pascal	d. Machine l	anguage			
Q.82 Programming lan	nguage which is designed	to integrate with .	Java is				
a. Scala		Pascal	d. Ruby				
Q.83) Scala is short for	rm of						
a. Scalable language	b. Sequential lan	guage	c. Script language	d. Scalar language			
Q.84) An open-source	build tool for Scala and.	Java projects is					
a. simple build tool	b. sequential bui		nplex build tool	d. script build tool			
Q.85) Now a days Scal	a's Java compatibility ma	akes well suited for					
a. Microsoft developm		e development					
c. Android developme	_	development					
O 86) Which of these i	is an incorrect Statemen	t?					
•	Q.86) Which of these is an incorrect Statement? It is necessary to use new operator to initialize an array.						
. Array can be initialize	•	•	rounded by curly brac				
-		eu expressions sun	iounded by curry brac	.cs.			
. Array can be initialized	•						
. None of the mentione	! a						
Q.87) Which of these i	Q.87) Which of these is necessary to specify at time of array initialization?						
a. Row	· · · ·						
a 		mn					
c. Both Row and Colur	b. Colu	mn e of the mentioned					

Q.88) Which of the following can be operands of arithmetic operators?

a. b. c. d.

PG DBDA FEB 19 Object Oriented Programming with JAVA 8

a. Numeric

b. Boolean

	c. Characters		d. Both Numeric & Char	acters	
b. c.	Integers Floating – poir	nt numbers and floating – point no	pplied to which of these?		
2.	Q.90) With x = 0 x = x + 1; x += 1; 4. x =+		g are legal lines of Java cod	e for changing the value of x	to 1? 1. x++;
٦.	a. 1, 2 & 3	b. 1 & 4	c. 1, 2, 3 & 4	d. 3 & 2	
	Q. 91)Decremo	ent operator, –, decrea b. 2 c. 3	ises value of variable by wh d. 4	nat number?	
a.	•	f these statements are perators are more effic		a run-time system than their	equivalent long
			n their equivalent long form only with numeric and chara		
	Q.92) Which o a. &	f these is not a bitwise b. &=	operator? c. =	d. <=	
	Q.93) Which o a.	perator is used to inve b. <<<	rt all the digits in binary re c. >>>	oresentation of a number? d. ^	
	Q.94) On apple bit?	ying Left shift operator	, <<, on an integer bits are	lost one they are shifted pas	t which position
	a. 1	b. 32	c. 33	d. 31	

a. Box obj = new Box();

b. Box obj = new Box;

c. obj = new Box();

d. new Box obj;
